L.O. - ADD AND SUBTRACT FRACTIONS WITH DIFFERENT DENOMINATIONS AND MIXED NUMBERS, USING THE CONCEPT OF EQUIVALENT FRACTIONS.

- **SOME WILL EVEN:** Solve problems involving adding and subtracting fractions.
- **SOME WILL:** Be able to identify missing numbers in fraction sums.
- **MOST WILL:** Recognise LCM (lowest common multiples) to convert fractions to same denominator.
- **ALL WILL:** Add and subtract fractions with same denominators.

GUIDED PRACTICE - MY TURN

- a) What fraction of a bale of hay does Hattie eat in a day?
- b) Molly eats one quarter of a bale of hay less than Hattie a day.

What fraction of a bale of hay does Molly eat in a day?

help

Draw a bar model to help you and don't forget about 'common denominator'.

How much hay do the horses eat together in a day?

DIVE DEEPER 1

1)

Use the same digit in both boxes to complete the calculation.
Is there more than one way to do it?

$$\frac{\boxed{}}{\boxed{20}} + \frac{\boxed{1}}{\boxed{}} = \frac{\boxed{9}}{\boxed{20}}$$

3)

Eva has a full tin of paint. She uses $\frac{1}{3}$ of the tin on Friday, $\frac{1}{21}$ on Saturday and $\frac{2}{7}$ on Sunday. How much paint does she have left?

2)

Fatima

$$\frac{5}{6} + \frac{1}{9}$$

We can't calculate this as the denominators are different.

It's the same as...

$$\frac{15}{18} + \frac{2}{18}$$

Reese

Who is correct? Prove it.

4)

Complete the following addition pyramids.

a)

c)

b)

d)

d)

DIVE DEEPER 2

5)

9a. Also accept answers which have not been simplified.

$$\frac{8}{45} + \frac{3}{5} = \frac{8}{45} + \frac{27}{45}$$

$$\frac{8}{45} + \frac{27}{45} = \frac{35}{45} = \frac{7}{9}$$

Dexter subtracted $\frac{3}{5}$ from $\frac{7}{9}$

Here are some lengths, which could be made out of connecting cubes or strips of coloured paper/card:

To start with, the **black** will be counted as ONE so that the **brown** one is $\frac{1}{2}$, the **blue** one is $\frac{1}{3}$, etc.

Using different combinations, put them together to equal the length of the **black**, which is 36 long.

For example, if you were to choose the **brown**, **blue** and **magenta** (pink) you could write them down as the $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{6}$

So we would have: $\frac{1}{2} + \frac{1}{3} + \frac{1}{6} = 1$

MOVING ON

Choose any four of the strips, except the **black** one, and put them together. Now, compare them with the **black**.

Here are two examples to start you off. Have a go and find as many different fours as you can.

Using a 3, 6, 12 and an 18 makes $1\frac{1}{12}$

Using two 12s and two 9s makes $1\frac{1}{6}$

GOING EVEN FURTHER

Now the **light blue** strip is the ONE (1).

Use the same fours that you chose before but this time, compare them with the light blue strip instead of the **black**.

Here are the examples used above, but this time compared with a light blue:

Comparing these four to the **light blue** it makes $3\frac{1}{4}$

Comparing these four to the **light blue** it makes $3\frac{1}{2}$

Now you go ahead with the fours that you have chosen.
